Abstract

The function hb_func() represent the binary entropy.

1 Introduction

The function hb_func() in the m-file hb_func.m is defined as:

```
H = hb_func(P);
```

This function represent the formulation of binary entropy H of probability P.

$$H = -P \, log_2(P) - (1 - P) \, log_2(1 - P) \tag{1}$$

This form is showed in [1].
